

Requirements Traceability Matrix (RTM)

Software Engineering Lab-1

Name: Mrinmayi Raman SRN: PES1UG24CS278

Req ID	Requirement Summary	Related Use Case(s)	Acceptance / Verification Criteria
FR-001	Analyze transaction logs to identify recurring billing patterns and project total monthly subscription expenditure.	Identify Recurring Subscriptions	Pass: recurring transactions are identified and estimated monthly subscription expenditure is displayed. Fail: a one-time payment is incorrectly classified as recurring.
FR-002	Allow the user to import financial transaction data from supported CSV or OFX files.	Import Transaction Data; Validate Transaction Data	Pass: a valid CSV/OFX file is imported and transactions are displayed. Fail: a supported file is rejected or not imported correctly.
FR-003	Display identified recurring subscriptions with merchant name, payment amount, and expected renewal date.	View Subscription Overview	Pass: each identified subscription displays merchant, recurring payment amount, and expected renewal date. Fail: one or more details are missing.
FR-004	Alert the user before an identified subscription reaches its renewal date.	Receive Renewal Alerts; Send Renewal Notification	Pass: the user receives an alert before the scheduled renewal date. Fail: no alert is generated before renewal.
FR-005	Provide cancellation guidance for an identified subscription when requested by the user.	View Cancellation Guide; Open External Cancellation Website	Pass: cancellation instructions are displayed for the selected subscription. Fail: available cancellation guidance is not provided.
NFR-001	Securely parse imported CSV/OFX financial transaction files without storing raw banking credentials in cleartext.	Import Transaction Data; Validate Transaction Data	Pass: transaction files are processed without raw banking credentials being stored in cleartext. Fail: raw banking credentials are stored in cleartext.
NFR-002	Complete transaction analysis and display subscription expenditure results within 5 seconds for files containing up to 10,000 records.	Identify Recurring Subscriptions	Pass: results are displayed within 5 seconds for up to 10,000 records. Fail: processing exceeds 5 seconds under the specified condition.
