Functional and Non functional Requirements

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall analyze transaction logs to identify recurring billing patterns and project the total monthly subscription expenditure.	High	Pass: Recurring transactions are identified and the estimated monthly subscription expenditure is displayed. Fail: A one-time payment is incorrectly classified as a recurring subscription.	This is the core functionality of the subscription auditor.
FR-002	Functional	The system shall allow the user to import financial transaction data from supported CSV or OFX files.	High	Pass: A valid CSV or OFX file is successfully imported and its transactions are displayed. Fail: A valid supported file is rejected or its transactions are not imported correctly.	Transaction data is required for identifying subscriptions and calculating expenses.
FR-003	Functional	The system shall display the identified recurring subscriptions	High	Pass: Each identified subscription displays its merchant,	Users need clear subscription information to monitor

		along with their merchant name, payment amount, and expected renewal date.		recurring payment amount, and expected renewal date. Fail: Any identified subscription is displayed without one or more of these details.	their recurring expenses.
FR-004	Functional	The system shall alert the user before an identified subscription reaches its renewal date.	High	Pass: The user receives an alert before the scheduled renewal date of an identified subscription. Fail: No alert is generated before the subscription renewal.	Advance alerts help users avoid unexpected recurring charges.
FR-005	Functional	The system shall provide cancellation guidance for an identified subscription when requested by the user.	Medium	Pass: The system displays cancellation instructions for the selected subscription. Fail: The system does not provide cancellation guidance for a subscription with available cancellation instructions.	The problem statement specifies cancellation guides as a feature.
NFR-001	Nonfunctional – Security	The system shall securely parse imported CSV and OFX financial transaction files without storing raw	High	Pass: Transaction files are processed successfully and no raw banking credentials are stored in	Financial transaction data is sensitive and must be protected.

		banking credentials in cleartext.		cleartext during testing. Fail: Raw banking credentials are stored in cleartext.	
NFR-002	Nonfunctional – Performance	The system shall complete transaction analysis and display the subscription expenditure results within 5 seconds for a transaction file containing up to 10,000 records.	High	Pass: The results are displayed within 5 seconds for a file containing up to 10,000 records. Fail: Processing takes more than 5 seconds under the specified test condition.	Fast analysis provides a responsive user experience when processing financial data.
